Spécialités:

Matériel:

Résumé: (traduction alternative)
With a very pleasant access through the Estós valley, we have this impressive gorge of always high flow, very cold water and with a lot of movement at the base of the waterfalls. All this makes this beautiful descent of jumps, abseiling and abseiling is a technical canyon and only for experienced people.
Attention! the facilities may suffer the consequences of the harsh winters.

Hydrologie:

Accès: (traduction alternative)
Take the N260 to Castejón de Sos, where we turn off to Benasque on the A139.
We cross Benasque and continue along the road. After passing the traffic circle of Cerler we will arrive at the bridge over the Ésera, after 100m we have the detour to the left to the Estós Valley. We will go to the parking lot.

Approche: (traduction alternative)
We will leave along the GR towards the valley and the Estós refuge. We will leave behind the detour to Batisielles and we will arrive after 45 minutes at the exit of the gorga where we have a couple of viewpoints from which we can evaluate the flow. We will climb the remaining meters to the plains of Turmo (where the cabin of the same name is) and we will see a walkway. We will be able to rappel or jump from the footbridge to access.

Tour: (traduction alternative)
Cold, hard, technical descent, with almost opening facilities due to the harshness of the winters... And to all this we add the high flow of the Estós river. Not for this reason we will have to forget this beautiful descent that at the end of the summer will offer us skills, rappels, rapids, in a wonderful environment.

Retour: (traduction alternative)
After the last rappel, the longest of about 18m, we have the exit to the viewpoint on the right, with a somewhat exposed climb. We can also exit a little further on. Then it only remains to undo the way up.
