<b>Résumé:</b> (traduction alternative) Not without good reason one of the most impressive canyons in Europe; beautiful ornate rock formations; sinter curtains; several holes and siphons; cold clear water (in spring); pump exits can be problematic at low water; long cave-like canyon in complete seclusion; only difficult emergency exits in the middle; many climbing passages, mostly grippy rock; large glued anchors; combination of Gorge Blau and Torrente de Pareis possible, but then take the shuttle car to "Calobra".		
<b>Hydrologie:</b>		
<b>Accès:</b> (traduction alternative) 40min + 10min car transfer From Port de Soller, take the main road C711 towards Soller. After the tunnel there is a traffic circle where you turn off in the direction of Pollenca. From here, follow the long winding mountain road C710 for almost 1000m, where a tunnel leads to the 1st reservoir "Embassament de Cuber" and after a short distance to the 2nd reservoir "Embassament des Gorge Blau". After another tunnel, the turn-off to "Sa Calobra" follows, with a kiosk and large parking lot on the left (parking entry). Before that, however, the shuttle car must be driven 4 km further to the parking exit at the "Escora" restaurant (parking lot on the left).		

**Approche:** (traduction alternative)

From the parking entry, follow the road in the direction of travel for approx. 100m. After the stone bridge, a forest path branches off down to the stream. There you will find an old dilapidated house (Central Electrica). Entry into the streambed at approx. 500m.

Alternatively, you can enter via the Pas d'en Duro, which joins halfway down the canyon, just before the start of Sa Fosca. From Escorca, follow the road towards Soller until you come to a signposted viewpoint, just after which there are modest parking facilities on the right near a pointed rock (do not use the parking spaces at the viewpoint - if you don't have a parking space here, it is better to park in Escorca). From the parking lot at the pointed rock, walk along the road towards Soller for about 300m until you reach an iron gate in a wire mesh fence on the righthand side (N 39.82817° E 2.83288°) Go through the gate and, keeping to the right, descend on a clear path. In the area of a steep meadow by an olive tree (N 39.82898° E 2.83322°), turn left and descend across the meadow towards the saddle (1 cairn and faint tracks). In the saddle, after a brick shelter, turn right into the canyon where the first fixed rope is already installed (N 39.82939° E 2.83198°). From here, about 300m of fixed ropes lead down to the bottom of the gorge, alternatively to the fixed ropes there are also abseiling points. To climb the Pas d'en Duro ascent, hand and chest ascender are required - not a via ferrata in the true sense of the word.

**Tour:** (traduction alternative)

Once you reach the stream, the trail initially follows the streambed, partly flat. Smaller steps can be bypassed or downclimbed. The first abseiling point is not long in coming. After about 30 minutes of walking and downclimbing, the canyon becomes more continuous. The steps are rappelled, downclimbed, jumped or slid, depending on the water level/ability. With each step, the canyon becomes more impressive and more incised. There is no need for artificial light until you reach the emergency exit in the middle of the canyon. (The emergency exit on the right is well equipped but difficult. It leads vertically out of the canyon via iron stirrups and fixed ropes. Can also be used as an entry). If you were already unsure/overtaxed up to the emergency exit, you should definitely not continue here. For well-trained canyoneers, this is where the most mentally and physically demanding, but also the most beautiful part of the canyon begins. Headlamp and spare lamp should be checked one last time before entering the "Sa Fosca" (the darkness). The canyon, especially the 2nd part, requires a water level that is not too high, as there are several narrow canyons, holes and siphons. Daylight enters the Sa Fosca in a few places. Due to the length and difficulty of the gorge, an early start is advisable. The canyon gets the best light in the morning. The steps are all optimally equipped with glued anchors or bolts. Many places can be jumped or downclimbed (depending on the water level!). After a longer swim, the canyon opens up. A final step leads to the exit of the canyon. Here the water seeps into the middle of the high rock faces before you reach the open streambed.

**Retour:** (traduction alternative)

Once you have daylight again, climb the last sections into the shallow streambed. Here the Gorge Blau meets the Torrente de Lluc, which you follow right over the streambed or along a narrow path (! If you go left here, you follow the Torrente de Pareis for approx. 3 hours to the sea). After about 10 minutes you will see a signpost with the path up to Escora. Follow this for approx. 1.20 hours. Steep at first, then more leisurely in many serpentine through high grass, up to the road (parking exit). (The path is not easy to see through the high grass).

Automatisch importiert von Descente-Canyon.com für Canyon Gorg Blau i Sa Fosca Le plus beau d'Europe ;) dans le style canyon calcaire ! Gorg blau en eau très ludique. Et sa fosca magnifique ! (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2829/observations.html>)

2026-04-18 | Massimo Loriato | ⭐⭐⭐⭐⭐ |📖⭐⭐|📌⭐⭐⭐|🌊 Normale | 🟢 Terminé

Parked at Bar Else Arcs, walked a little bit back on the road till the bridge where you can find the evident old road that you can follow down to the old electric power station structure. All anchors in perfect conditions and water level very good, reported more than usual this year by locals and guides, 6h in a group of 16. Part of the group exited by the path leading back to Escorca (approx 2h), while the rest went down through Paresi (approx 2h30).

All good, anchoring perfect (traduction alternative)

2026-03-27 | Joey CIA | ⭐⭐⭐⭐⭐ |📖|📌⭐⭐⭐|🌊 Normale | 🟢 Terminé

Gorg Blau, SaFosca and Torrent de Pareis completely climbed. Anchors all top! Great jumps possible! Always a highlight! (traduction alternative)

2026-03-19 | Kris Klein | ⭐⭐⭐⭐⭐ |📖|📌⭐⭐⭐|🌊 Normale | 🟢 Terminé

Are no via ferrata, fixed ropes in very good condition. Stands in the canyon all in order. Even had running water in places, so top conditions. Fantastically beautiful canyon. Car to car approx. 6:30 hours (six of us) (traduction alternative)

Automatisch importiert von Descente-Canyon.com für Canyon Gorg Blau i Sa Fosca Psrcouru Sa Fosca uniquement. Equipement ok. Gorg Blau est totalement sec malgré les importantes pluies de ces derniers jours. Le niveau des vasques dans Sa Fosca est vraiment bas. Une descente incontournable en Europe à faire et refaire! (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2829/observations.html>)

2026-02-26 | Rok | ⭐⭐⭐⭐⭐ |📖⭐⭐⭐|📌⭐⭐⭐|🌊 Faible | 🟢 Terminé

Everything tip top. From the very top to the beach. Rightly one of the most beautiful tours in Europe (if you like darkness). Not much water but enough to have fun. Many jumps possible. (traduction alternative)

Automatisch importiert von Descente-Canyon.com für Canyon Gorg Blau i Sa Fosca Covered in pairs, complete, 10 hours from car to car, taking time in the canyon and including a lunch break. Parked at the viewpoint, approach by road to the track before the aqueduct. Quite a few branches on the track to the stream. Blau: not much water but the pools are clear. Nice jumps and a beautiful gorge that does not disappoint. This part is worth exploring, especially with the water that adds up as you descend. End of Blau in a DC. Sa Fosca: the canyon does not disappoint. Magnificent and continuous - atmosphere guaranteed. The water is a little cool. Return: we opted to
