

Peonera (inferior)

Cañón de la Peonera Inferior, Rio Alcanadre

Creare: 2023-03-09 20:55:07	Aggiornamento: 2023-11-18 04:49:43	Stampa: 2026-06-07 09:06:39
Paese: España / Spain Regione: Aragón Sottoregione: Huesca Città: Bierge, Morrano		
Difficoltà: non così difficile	Grado: v2 a3 III	Tempo totale: 5h55
Tempo avvicinamento: 45min	Tempo giaro: 5h	Tempo ritorno: 10min
Altitudine di entrata: 555m	Altitudine di uscita: 435m	Altitudine delta: 120m
Lunghezza del canyon: 5200m	Rapel più alto: 4m	Quantità rapelli: 1
Transporto:	Tipo di roccia:	Area di ingresso: km ²
Stagione:	Orientamento: Sud	Tempo migliore:
Valutazione: ★ 4.1 (5)	Info: ★ 2.8 (4)	Belay: ★ 2.5 (2)
Specialità: Sifone,		
Attrezzatura: Corde: 1x20m		
Sintesi: (traduzione alternativa) Aquatic hiking and swim canyon, varied and with possible jumps.		
Idrologia:		
Accesso: (traduzione alternativa) For an integral ascent of the Peonera Inferior, we drive from Bierge on the A-1227 in a north-westerly direction almost to the bridge over the Alcanadre with a view of the dam, but turn right up the dirt road 220m before reaching the bridge and park our first car there in the large parking lot - 1.8 km from Bierge to the junction. With the second car we continue on the A-1227 to Morrano (4.6 km from the bridge over Rio Alcanadre). From here, continue for another kilometer and turn right onto an open area with trees slightly below road level, where we park the second car (beware, risk of burglary!).		
Avvicinamento: (traduzione alternativa) See http://www.descensodebarrancos.com/barrancos/peonera/topo/mapa.html . So we start on the track at "Cadena" (chain) in a northerly direction. After a little more than 1 km, it bends to the EAST and we ignore the junction of a path to the left in the direction of Pedruel - "Camino de la Peonera" - and we descend into the wooded area. There we come across a signpost indicating the entry to the Peonera inferiore to the left of the track. Follow the path, keep right at a fork and climb steeply up to the streambed, where you can also open the course with a jump ("Badina Cebollero" near Salamero). If we want to descend into the riverbed at the next access point, we follow the aforementioned signpost in the direction of "Huevo de Morrano" to the south and after about 100 m turn off the track onto a not very clear path in an easterly direction ("Camino de Escaliguala"). We come to a saddle where we have a beautiful view into the canyon and descend here - partly on fixed ropes or chains below a rock face - to the river bed. We can also descend steeply from the large parking lot on the road from Bierge to Rodellar directly to the beginning of the narrowing (this is usually the commercial route). At the spring, you can then take a track up to the left and back to the car.		

Giro: (traduzione alternativa)

Initially walking, wading and swimming down the open riverbed, we pass several half-caves that have been carved out by the river. After about 1.5 hours - calculated from the 2nd access point - the canyon narrows. Then the access via the "Faja os Caracoles" comes from the left. This access reaches the river bed at the rocky chaos that immediately precedes the Estrechos de Tamara.

The following Estrechos de Tamara are the centerpiece and highlight of the Peonera inferiore. At their beginning there are some siphons, which can be dangerous if the water flow is sufficient (several deaths have already occurred). Now the Peonera becomes a swim canyon. Where the narrow walls recede again, we see the Fuente (spring) Tamara on the right, where we could take a footpath up to Morrano and the upper car.

From the Fuente Tamara, a footpath on the left bank (but somewhat separated from the river) would also lead directly to the exit point at the dam.

If we continue along the open riverbed, after a while we come to a place where the water has suddenly eaten into a narrow chute (start of the "Puntillo" parts).

Here, just below the first waterfall, you can enter from the right-hand side with a small jump. This is followed by varied flowing channels, some of which are underground, an interim opening of the gorge and a short final section that begins with a spring on the left. At the exit of the Puntillo there are various jumps. Here, too, the chutes of the Puntillo should only be walked on when the water thorns - as is usual in summer - are not increased (deaths have also occurred here).

We continue downhill, hiking and swimming again, finally becoming somewhat monotonous and tiring. Finally, we come to the dam, where we can end our tour by jumping off the dam, following the example of those bathing here.

Ritorno: (traduzione alternativa)

From the top of the weir, turn left onto the slope and then up the steps on the left to the lower car.

Automatisch importiert von Descente-Canyon.com für Canyon Peonera (inferior) RAS, conditions superb! Niveau d'eau à 530 le matin. Pour le chaos: il se trouve une corde avec nœuds rive droite pour descendre juste après un petit rappel (1m) dans l'eau vive et une monte dans une trou (2m). Au début des blocs, on a rencontré deux groupes guidés. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2788/observations.html>)

Automatisch importiert von Descente-Canyon.com für Canyon Peonera (inferior) Un parcours toujours aussi long et toujours aussi joli, surtout avec du soleil et des vasques bleus émeraude. Beaucoup d'eau donc il faut faire un peu attention. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2788/observations.html>)

Automatisch importiert von Descente-Canyon.com für Canyon Peonera (inferior) Fait en groupe de 6. Nous avons clairement été surpris par le débit en arrivant aux étroitures. Aucun équipement n'est prévu pour évoluer hors-actif, nous nous sommes donc débrouiller à l'aide d'amarrage naturel et d'assurage au poids du corp. Au final nous avons réussi à sortir en RD juste avant l'énorme roché (la moitié de la hauteur du canyon). Et nous avons récupéré le sentier retour. Echappatoire compliqué mais providentiel. Après recherche nous avons trouvé une page indiquant le débit du Alcanadre ici : <https://www.saihebro.com/tiempo-real/grafica-senal-A091G65QRIO1-caudal-alcanadre-en-lascellas> Le débit indiqué pour notre période est de 3870l/s (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2788/observations.html>)

Automatisch importiert von Descente-Canyon.com für Canyon Peonera (inferior) DC+. On a passé presque tous les siphons mais c'est sûr qu'il vaut mieux connaître les passages clés. Corde inutile avec ce débit. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2788/observations.html>)

Automatisch importiert von Descente-Canyon.com für Canyon Peonera (inferior) Magnifique découverte que Peonera (partie inférieure) en ce 3 jours de stage initiateur canyon... Nous ne fûmes pas déçu par le choix de nos encadrants afin de nous tester en mode « eau vive »... Le débit actuel ne laisse pas de place à l'improvisation et est réservé aux équipes entraînées et ayant une parfaite connaissance des spécificités et des pièges (nombreux siphons potentiellement mortels) que réserve cette descente... Température de l'eau ce jour mesurée à 14 degrés... Ce n'est certes pas très « froid » mais couplé au gros débit le risque d'hypothermie peut rapidement se manifester en cas de tenue inadaptée (la veste de kayak par dessus la néoprène peut s'avérer être un choix judicieux ainsi que des gants)... (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2788/observations.html>)
