Paese: France **Regione:** Auvergne-Rhône-Alpes **Sottoregione:** Isère **Città:** Malleval-en-Vercors		
Difficoltà: un po' difficile	**Grado:** v4 a2 II	**Tempo totale:** 2h
Tempo avvicinamento: 15min	**Tempo giaro:** 1h30	**Tempo ritorno:** 15min
Altitudine di entrata: 740m	**Altitudine di uscita:** 640m	**Altitudine delta:** 100m
Lunghezza del canyon: 1000m	**Rapel più alto:** 35m	**Quantità rapelli:** 6
Transporto: Auto necessaria	**Tipo di roccia:** limestone	**Area di ingresso:** 4.30km²
Stagione: aprile - giugno	**Orientamento:**	**Tempo migliore:**
Valutazione: ☆ 2 (3)	**Info:** ★ 3 (3)	**Belay:** ★ 2 (3)

Specialità:

Attrezzatura:
Corde: 2x40

Sintesi:
The Malin is a beautiful canyon featuring short abseils at the beginning and a scenic larger abseil at the end. With normal water levels, the gorge is relatively easy.

Idrologia:
There is usually little water during the summer months

Accesso:
Drive to the village of Cognin-les-Gorges, turn off there and follow the signs towards Gorges du Nan. Cross the bridge and park at the designated parking area.

Avvicinamento:
Walk back across the bridge and turn left. Pass the house and follow the hiking trail uphill. Once you reach the paved road again, continue walking until you arrive at the hairpin bend. At the bend, leave the road and follow a narrow trail leading down to the stream. The trail is hard to spot.

Giro:
The canyon begins with several small abseils and concludes with a final descent of approximately 35 meters. You need a safty line (handline) to get to the anchor.

Ritorno:
After the final abseil, follow the stream until it joins with another. Continue 10 meter downstream along the main flow and look for a steep path on the right-hand side. This trail leads back to the road. Follow the road to return to your car.

Note: Do not exit the canyon directly at the 35-meter waterfall, as this area is private property.

Coordinate:
Parcheggio Entrata e uscita 45.1565 5.4399
Inizio del canyon 45.1528 5.4326
Fine del canyon 45.1558 5.4368

Water level slightly higher than in the comparison picture. But no problem as approx. 40% of the water volume is added directly in front of the 40. The 40 is rappelled to the right of the jet. Otherwise everything is fine. (traduzione alternativa)
