Specialità:

Attrezzatura:

Sintesi: (traduzione alternativa)
The Ordiceto or Urdiceto ravine rises from the lake of the same name at an altitude of more than 2000m from the snow accumulated in its glacial cirque. This gives it a permanent and very cold flow that, in case of entering it with high flow, can give us a scare in its fattened area for its dangerous water movements.
Well formed descent that, in spite of the high flow, does not allow us to make jumps. A very close and easy access, as well as an almost immediate return to get into this short but unbeatable descent.

Idrologia:

Accesso: (traduzione alternativa)
We have to go to Parzán, for this we arrive at Ainsa and take the A138 towards France. After passing Bielsa we arrive at Parzán and shortly after passing the pk 84 we see the sign "Urdiceto lake". We take this forest track that crosses the river Barrosa. We parked on the esplanade on the other side of the river, there is currently a company of guides (Impande Guias).

Avvicinamento: (traduzione alternativa)
We continue along the forest track ascending towards Urdiceto lake. Two sharp bends will raise us above the valley and then another to the left takes us into the valley of Urdiceto. In the sharp bend to the left we see a meadow with beehives and a path. We pass the beehives and soon we enter the ravine.

Giro: (traduzione alternativa)
Gully to evaluate very well the flow because in the fattened zone it has a lot of movement. Very slippery and cold

Ritorno: (traduzione alternativa)
After the last rappel we exit to the right to the meadow. We cross it and reach the car.

Automatisch importiert von Descente-Canyon.com für Canyon Ordiceto Conseil : privilégiez l'approche via la piste, c'est beaucoup plus simple.Avec ce débit la goulotte doit passer, c'est à l'appréciation de chacun.Nous l'avons évitée via la main courante déjà équipée en fixe. Le relais accessible via la main courante dispose également d'une pédale en fixe.Tres beau canyon à faire plutot l'apres midi pour la luminosité. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22117/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Ordiceto R4 de 16m évité par la main courante rive gauche, trop d'eau dans la goulotte et fort drossage en bas. corde fixe ok avec pédale au relais suspendu (r15). Pour R5 de 11m, brin de rappel idéal à 20m, vasque d'arrivée tournante sens horaire. Main courante fixe de R6 ok. une chaîne plastique avec panneau d'interdiction sur le chemin retour et également sur le chemin de départ (bien longer les bords du près). Automatisch importiert von Descente-Canyon.com für Canyon Ordiceto Première fois dans le canyon, le débit semble correct mais avec les resserrements, ça pousse dans certaines cascades. Pour l'approche, le chemin de l'option 2 traverse une propriété privée.Nous sommes sortis au niveau de la prise d'eau (plus d'eau dans la vasque suivante).Pas mal de mains courantes multi-points posées en fixe (état ok) facilitent l'accès à certains relais hors d'eau.
