ramponi, viti da ghiaccio, Utensile da trapano,

Sintesi: (traduzione alternativa)
Alpine rappel canyon, in earlier years usually covered by avalanche debris all year round. Finding the entry is not easy. Completely different character to the lower parts.

Idrologia:

Accesso: (traduzione alternativa)
Either from Mittenwald or from Seefeld to the Leutasch valley. Between Lochlehn and Reindlau is the Hotel Hubertushof. Here we park our car at a suitable place.

Avvicinamento: (traduzione alternativa)
We follow the signposted path, later path, in the direction of Meilerhütte. After some time we pass a spring and after about 40 min. we reach the high valley , at the lower exit of which we enter the lower gorge section of the Berglein valley. Continuing on the path we see the final passage of the upper part. It now goes steeply uphill in many hairpin bends. After a haipin bend the path starts to climb again in hairpin bends. We come to a gravel creek bed and see on the right a latschenfreie Fläche (GPS: N 47' 24' 41.97 / E 11' 9' 29.95). We cross the dry streambed, climb about 5m (height) to the ridge on the other side of the slope (1590m alt.) and then traverse the open area slightly descending. In doing so, we keep towards a clear gulch in the right part of the mountain pine belt. Here again a recognizable track leads in northern direction towards the canyon rim. We ignore tracks branching off to the right. At GPS: N 47' 24' 47.75 / E 11' 9' 26.84 it is reached. At the edge of the canyon we see a thick root, where we can rappel down into the canyon, which is still dry.

Giro: (traduzione alternativa)
The initially open canyon narrows continuously. The canyon walls become higher. The higher rappels are found in this first third. A number of smaller rappels and small descents follow. These are partly unpleasant, because the channel is very slippery. Sometimes anchors are missing. After the final passage, which can be seen in the access, one stands again in the high valley above the lower part of the canyons.

Ritorno: (traduzione alternativa)
Either you continue the tour in the lower part of the canyon (info see there) or you change to the right out onto the access path and follow it down to the car.

2 new anchors installed; the anchor before the first avalanche might need to be reinforced. Snow is VERY unstable right now; start climbing very early. Rescued a half-dead toad from the canyon :) (traduzione alternativa)

Avalanche debris—you can currently get through it just fine. A few of the downclimbs could still use an anchor. (traduzione alternativa)

There are still some avalanche debris left, but it's easy to get through. An ice axe is a good idea. (traduzione alternativa)

A little higher than described, so it's easier to get through the slippers. Highly recommended. (traduzione alternativa)

Finding the entry point is not entirely obvious. We fought our way through the mountain pines and rappelled into the still dry gravel gully at a suitable point. The first half of the upper section is rather sparsely equipped. If you have problems with downclimbing, you should take some climbing gear with you. The second part of the upper section is very good and also equipped with glued anchors (there is probably an intermediate entry point here). The lower part is also superiore equipped. Two people can complete the upper and lower sections in just under 3 hours (traduzione alternativa)
