| Difficoltà: un po' difficile | Grado: v4 a3 IV | Tempo totale: 7h5 |
| Tempo avvicinamento: 45min | Tempo giaro: 6h | Tempo ritorno: 20min |
| Altitudine di entrata: 1030m | Altitudine di uscita: 480m | Altitudine delta: 550m |
| Lunghezza del canyon: 1400m | Rapel più alto: 35m | Quantità rapelli: 35 |
| Transporto: Auto facoltativa | Tipo di roccia: granite | Area di ingresso: km ² |
| Stagione: maggio - settembre | Orientamento: Ovest | Tempo migliore: 9-12 Ore |
| Valutazione: ★ 4.3 (20) | Info: ★ 2.8 (16) | Belay: ★ 2.5 (19) |
| Avvertenzas: inattivo: <i>Evitare il disturbo attraverso il canyoning di massa (11.08.25 - 31.08.25)</i> Dopo la RIC 2025 sono stati segnalati grandi gruppi che hanno causato rifiuti nei parcheggi, occupato proprietà private, festeggiato ad alto volume dopo il canyoning e parcheggiato senza considerare l'accesso degli abitanti locali. Le comunità locali sono già arrabbiate! Per evitare conseguenze negative e regolamenti, assicuratevi di agire nel rispetto dell'ambiente e delle comunità locali. Vi preghiamo di utilizzare ogni auto in modo completo per evitare la congestione dei parcheggi, di utilizzare parcheggi alternativi, di essere silenziosi, di limitare al minimo l'uso di fischietti nel canyon, di rispettare la cultura cattolica locale non spogliandovi in modo visibile e di utilizzare abbigliamento per la risalita. Non fate festa dopo il canyoning nei parcheggi e rimuovete i rifiuti per favore! | | |

| Sintesi: (traduzione alternativa) It is worth doing Boggera superior only after rain. See Hydrology below. Great at the top, a little less spectacular in the lower third. Clean water; very long tour (start early); countless pools which can also be jumped or slid very often; be careful even with little water as the pools are very deep and cut out and the exit can be disastrous; some places can be bypassed; beautiful granite rock, some emergency exits. Helicanyoning possible. Water drainage above | | |
| Idrologia: (traduzione alternativa) The middle third of Boggera superior is usually dry in summer or has very poor water quality (brown and with lots of flies). Check the recent rainfall. The following is a guide: <20mm: Not enough 50mm: Next day 100mm: Once the level drops at the last Inferior waterfall, then good for 2-3 days. How to find the precipitation records: App "MeteoSwiss", scroll down to "Measurements", list (icon top right), Biasca, rain (icon bottom), scroll right to 72h. | | |

Accesso: (traduzione alternativa)

Approach Normal:

On the road n.2 coming from the south, shortly after Honda dealer, turn right through an underpass of the railroad line, immediately after that turn right again on gravel road, still about 100m to the parking lot. At the level of the canyon exit there is also the railroad station "Stazione Osonga-Cresciano".

Heli approach:

From Biasca ri. Osogna --> 500m north before the road leading to Lodrino turn left and drive under the drawbridge --> continue to the right for about 200m until you reach the riding arena --> park the 1st car here --> take the 2nd car and drive to the Heli-TV station. The helicopter can carry 4 people --> the cost of the flight to the entry for the Boggera Superiore is 182CHF (about €135,-) --> very worthwhile!

Avvicinamento: (traduzione alternativa)

Ascent options from the lower parking lot (2h) or via the toll road (for each vehicle and each entry: 10 CHF or EUR in coins, can mix CHF and EUR) to Censo and from there via a hiking trail (25 min). For description see literature/Swisstopo.

Helicopter:

After landing with the helicopter, you are left on a hiking trail past a suspension bridge to a water catchment where most of the water is drained. Don't get in too early: the uppermost, normally water-bearing part is not drilled.

Giro: (traduzione alternativa)

Pay attention to the boiler in the middle part if it is not filled with water. Place a person in the previous fall and then in the kettle to check that the hand line is in position for exit. This person should be able to climb a rope if a retreat is required. The cauldron can be bypassed from the top of the previous abseil point.

The entry is via the steep forest terrain --> once in the canyon, the first deep pools start immediately --> depending on the water level, most of the pools are jumpable --> the route continues continuously over beautiful granite rock --> the belays are well placed, but mostly only single pitons --> watch out for the sharp edges and the narrow crevasses (several rope remnants in various places already show unfortunate rappel maneuvers) --> from the middle there are several rappels that also increase in height --> however, there are always pools and downclimbs that require concentration and fitness --> in the lower part you can enjoy beautiful views from the rappels that offer up to 35m --> after the last rappel of approx. 18m (jump?!) you usually come back to civilization --> here is the exit (480Hm) or entry of the Boggera Inferiore --> either you follow the course of the gorge (see Boggera inferiore) or you take the hiking trail back to the parking lot in about 15min.

Caution: There is a mousetrap in the middle part, if this depression does not contain water it is very difficult to get out again. Before roping in, make sure that there is no water or at least the handrail in the depression. If not, climb back up on the ropes and bypass the depression.

Ritorno: (traduzione alternativa)

Leave the canyon at 480m on the left and return to the parking lot via the hiking trail in about 15 minutes, or do the lower part of the canyon (75 minutes).

Automatisch importiert von Descente-Canyon.com für Canyon Cresciano (supérieur) Petit filet d'eau mais tjrs interessantL'eau est froide, ne pas sous estimer la longueur de cette course à cette période (gestion du froid et fatigue)Quelques léger engravement sur ces deux dernières années. Le saut de 17 juste avant la fin touche le fond. Environ 3m 3m50 de fond sur du gravier. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2663/observations.html>)

Automatisch importiert von Descente-Canyon.com für Canyon Cresciano (supérieur) Ça coule à peine dans la partie haute. Un copain de l'équipe a tapé la tête assez fort sur le T12 (S12/C14). Ce tob possède une cassure et fait décoller pour ratterir sur le bas du tob. Ça passe bien dans la majorité des cas mais pas toujours ...On a donc testé la première échappatoire rouge (impossible de trouver la jaune d'avant). Elle passe très facilement et permet en montant en 10' de retrouver la marche aller. (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2663/observations.html>)

2025-09-06 | System User | |📖|📍| |

Automatisch importiert von Schlucht.ch für Canyon Boggera superiore / Cresciano, Wasserstand: "Mittel"
Verankerungen: "Gut" Sehr griffig, trotzdem eher bräunliche Wasserfärbung. 1 Haken fehlt , Baum links bzw Rutsche, Sprung als Alternative. (Quelle: <https://schlucht.ch/schluchten-der-schweiz-liste/1083-boggera-superiore-cresciano>)

2025-09-06 | Bina |★★★★★|📖|📍★★|🌊 Normale |👍 Completato

In contrast to spring, extremely grippy to ride. The T12/S12/C14 (RD) lacks a foothold. But you can rappel down a thick tree on the left. (traduzione alternativa)
