Information on the dam from:

Energie Electrique du Simplon SA Tel. +41 (0)27 966 54 00

possibly the municipal administration of Gondo: +41 (0)27 979 15 01

It is highly advisable to check the water level beforehand from the lowest wooden bridge (key point).

A prevention concept has been developed in collaboration with people from the canyoning industry in the region.

It is mainly based on operational measures to limit the risk of overflows during the day.

In concrete terms, this means that the risk remains low as long as the water inflows can be stored in the reservoir, even in the event of an unforeseen shutdown of the Gondo power plant. However, as the storage capacity is limited, this safety margin can change quickly during the walk.

In order to keep people as informed as possible, EES provides its own website: <https://ees-canyoning.ch>. This site provides the best possible estimate in real time of the time until which no overflows are expected. This estimate is based on the latest available meteorological and hydrological forecasts, whereby an uncertainty must be taken into account (order of magnitude: 15 minutes).

Recommendations to users

- Visit the site regularly to obtain the latest information.
- Analyze the situation on site, taking into account the local weather conditions.
- Allow for margins of uncertainty in your planning.

If possible, the site will also indicate the dates of the next operational events (water drains, flushing) that will temporarily prevent canyoning. Any technical problems or exceptional operating conditions are also indicated on the page.

Accesso: (traduzione alternativa)

From Domodossola on the SS33 in the direction of the Simplon Pass (Switzerland). In Gondo, just after the Swiss border (before the petrol station) turn left down to the parking lot. Here the shuttle car can be parked right next to the exit. With the 2nd car, drive up the mountain road (several serpentine bends) behind the parking lot. After the last hairpin bend there are a few houses. Park here before the small fork left at the mirror.

Avvicinamento: (traduzione alternativa)

(on foot: 20min)

From the parking lot, walk a few meters until you see clear climbing tracks into the stream (1056m). Without a shuttle car, follow the mountain road to the "Stockalperweg" hiking trail, which crosses the road a few times. After about 20 minutes you reach the parking entry.

Giro: (traduzione alternativa)

The continuously watery canyon offers slides, jumps and rappels into pools, some of which are very deep. The water level and water depth should always be checked beforehand! Some pools recede when the water level rises. The abseiling sections, especially in the lower part (key section), also become very dangerous. The canyon remains very entertaining until the end, but should never be underestimated. One of the highlights in the lower part is a huge rock arch under which you can swim (possible jumps). Before the final waterfall, you can decide whether to leave or continue downclimbing (C40+ downclimb).

Ritorno: (traduzione alternativa)

You can get out of the canyon at about 920m before the last waterfall on the left via a small path. This leads to the road and shortly back to the parking lot.

2nd option: You can rappel about 40m over the last waterfall and climb the rest right over stone slabs to the confluence of the Doveria at 850m. Then get off to the parking lot on the left.

Automatisch importiert von Descente-Canyon.com für Canyon Gondo Canyon parcouru avec des clients...attention le barrages a apparemment purgé des milliers de tonnes de sable et de boue, les vasques sont quasi pleines pourtant elles sont profondes....obligation de sonder de partout avant de tenter un saut ou toboggan....seule la partie finale est peu prêt propre....l'eau est par conséquent trouble, ce qui rajoute une difficulté pour sonder....je pense qu'il n'y a presque pas de poissons qui aurait pu survivre, merci pour les actions toujours très écologiques des barrages Valaisans !!priorité au fric et à la production comme d'habitude....ils font chier ces canyoneurs ils sont jamais contents !!! Automatisch importiert von Descente-Canyon.com für Canyon Gondo parcouru intégralement avec le perfo et des clients. Avons reequipé quelques relais qui étaient bien pliés.débit qui augmente avec l'affluence rive droite. un énorme névé qui double quasiment le débit.un peu de graviers dans certaines vasques mais tout passe bien sauts toboggans. Rappels avec des nouveaux relais. j'espère qu'ils supporteront quelques crues..... (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2750/observations.html>)

Automatisch importiert von Descente-Canyon.com für Canyon Gondo Dc++, ça pousse dans les cascades. L'arche est juste exceptionnel... le rappel dans la faille est superbe. Tob eject au départ, sauts, eau transparente, que du bonheur. Beaucoup de relais défoncés par les crues ont été rénové mais pas tous... (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/2750/observations.html>)
