Specialità:

Attrezzatura:
Corde: 1x25m

Sintesi: (traduzione alternativa)
Beautiful aquatic hiking canyon without much difficulty; several narrows with little light; maze-like passageways; midday is when you have the most light in the canyon.

Idrologia:

Accesso: (traduzione alternativa)
From Villa di Villa drive in the direction of Tiago. In Tiago, turn left towards "Castello". After the village of Tiago, the road goes downhill and you cross a small bridge. The old parking lot here is unfortunately closed. Continue along the road until you can turn left to the Castello and stop at the large tourist parking lot. Either on foot or with the 2nd car, follow the road past the "Castello". The road changes from asphalt to gravel, then becomes asphalt again, then gravel again until you finally come back to the asphalt road. At the T-junction, turn left towards Feltre/Belluno. Continue. In the small village of "Val Maor", turn right at the first opportunity. Follow the road towards "Venastadio" as far as the soccer pitch. Park here (approx. 450m).

Alternative: From Mel at SP 1, drive via Carve to the sports field at the entry point, see: https://www.google.de/maps/dir/46.0599772,12.0802359/Parcheggio+Campo+da+Calcio/@46.0499146,12.1038527,14.56
We park the vehicle for a possible transfer (1.5 km, bicycle is sufficient) at Via Carve in a hamlet south of the village of Carve, see: https://goo.gl/maps/SYTX8xPZHXQ1Ph416
I describe the corresponding exit path as "Exit option 3"

Avvicinamento: (traduzione alternativa)
(with 2nd car 0min)
From the upper parking lot you reach the streambed and soon the 1st dam wall.

Giro: (traduzione alternativa)
The Maor is a unique aquatic hiking canyon in a vegetation-rich environment. There are 2 deep parts separated by a mostly dry streambed. In these parts there are 1000-fold layered rock slabs. In which the water has created labyrinthine passages. Surefootedness is required as in some twisted places the daylight only reaches the ground very sparingly (however, an artificial light source can normally be dispensed with). At the entry point after the 1st dam wall, which is left downclimbed via fixed ropes, the first parts of the route are cut in shortly. Then you walk for some time in the open streambed until you reach a 2nd dam wall where you rappel left from a tree for about 10m. There is a short open walking and descending section before continuing into the 2nd longer incised gorge section. The entry/descent into the 2nd section starts with a small step and a jump into a nice deep pool, then continues through slightly sloping watery corridors. At the end of the 2nd part, where you come across red boulders, the canyon opens up again. Here you come to a heart-shaped. Siphon that can be easily climbed around. This is followed by a walking passage interspersed with rocks, some of which are downclimbed or bypassed. After a longer section of walking, you come to a stream/inflow from the left, which you follow upstream over a few small steps to an old dam wall with water drainage. There is a good climb on the right-hand side. You will soon reach the road bridge and parking lot (approx. 350m).

Ritorno: (traduzione alternativa)
Exit option 1: Before the bridge, climb to the left out of the stream to the road and on the road until in the hairpin bend to the left a well-maintained hiking trail branches off. Follow this trail until you reach the parking lot at Castello.

Exit option 2: After the siphon and a short walking passages you will come to large red conspicuous boulders. Here you will find a yellow marking on the tree on the left (340Hm). Follow the mark on the left out of the canyon. First steeply up over forest embankment to a wire rope. Then straight ahead (do not follow the path to the right!) across the open area to the small group of houses on the gravel road (for this variant it is best to park the 2nd car in front of the houses to the left on the gravel road).

Exit option 3: We come to the conspicuous red boulder (see exit option 2) with red arrows to the right and left. Past this boulder another 50m or so downstream we see relatively clear footprints on the right bank leading up the bank at an acute angle to the right (Aug. 2023 cairn on the right in the streambed), see also photos. We follow the trail, which is clearly marked by cairns at each of the alternative options. This path is also marked on the open street map. In relation to the exit options 1 and 2 we come here relatively comfortable (in relation to variant 1) or relatively fast (in relation to variant 2) to the top. In addition, the implementation distance of 1.5 km is very short.

Canyon comodo e alla portata di tutti. Bellissime gole chiuse e un paio di tuffi davvero carini fattibili tramite corde fisse (bisogna però inerpicarsi un po' tra le pareti). Le gole strette non fanno passare molta luce, in alcuni periodi dell'anno potrebbe risultare freddo. Armi ok dappertutto, l'unica calata presente è attrezzata da ambo I lati. La parte finale è un po' lenta, con vari massi da scavalcare. Siamo usciti da un punto diverso rispetto a quelli descritti in prossimità di alcuni gradini in legno (vedi foto). Il sentiero portava al castello di Zumelle, ma è attualmente in disuso e nell'ultimo tratto siamo stati costretti ad addentrarci nel bosco. Canyon percorso in un paio d'ore in due persone

Automatisch importiert von Descente-Canyon.com für Canyon Maor Débit entre correct et petit filet d'eau, vasques claires et propres. L'écoulement se perd entre les 2 encaissements. Eau fraîche surtout dans l'amont, on cherche parfois à éviter les vasques !Une splendide randonnée aquatique, notamment dans le second encaissement, parmi les plus beaux que j'ai eu la chance de parcourir.Photos sur https://deprovenceetdailleurs.net/2026/08/maor-majeur.html (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22062/observations.html)

Done 1-2-3-4 + affluent. Exited at the Castello. Added the missing anchor in the superiore to take out the exposed downclimbing and another in the tributary to avoid rusty old 8mm. Cold this time of year. Everybody loved it. Though a bit long for some.

We descended the canyon the day after around 60mm of rain. So much fun!! We spent almost the entire descent floating down the canyon like a lazy river. The water levels were very high but ever obstacle (log jams, recirculations, undercuts) could be avoided by climbing or bridging over. A great day out when other canyons were too wet!
