Corde: 2x30m (1x 50m)

Sintesi: (traduzione alternativa)
Short, beautiful vertical tour with a view of the Zugspitze; several slippery spots; almost all abseiling points are in the water; some sharp edges; well set up; nice little narrow sections; several escape routes; east-facing; often spectators at the last cascade; sedimentary rock

Idrologia:

Accesso: (traduzione alternativa)
Coming from Germany you drive at the old customs office Ehrwald in the direction of the village Ehrwald. After a short distance across the border, there is a large cross and a sewage treatment plant on the right side of the road. Then there is a small bridge that leads over the Loisachbach with a parking lot for about 10 cars directly level with the road. Park here.

Avvicinamento: (traduzione alternativa)
From the parking lot, cross the nearby bridge. If you want to check the water level briefly, follow the cycle path (gravel) to the right after the bridge for 5 minutes. Then go back to the bridge and follow the asphalt mountain road (no driving) to the left in the direction of "Häselgehralm". After a rightward haipin bend, the road leads over a bridge (Häselgehrbach). This is followed by a leftward haipin bend with a cross. From here it is not far until you come more or less straight to the stream. The entry point is at approx. 1090m directly by the wooden beams (bridge) that lead over the Häselgehrbach.

Giro: (traduzione alternativa)
Apart from a short walking passage in the upper part, the canyon is very continuous. Depending on the depth of the water, some steps can also be slid or jumped. The canyon is technically not too difficult, but should not be underestimated at higher water levels, as you often have to rappel in the water jet and the rock is usually very slippery. Several small, beautiful washouts/chokepoints and the max. 25m high abseils in combination with the short access are ideal for a casual half-day tour.

Ritorno: (traduzione alternativa)
After the last cascade at approx. 970m, follow the cycle path on the right for 5 minutes back to the starting point.

Coordinate:
Inizio del canyon 47.4217 10.9119
Fine del canyon 47.4203 10.9170
Parcheggio Entrata e uscita 47.4188 10.9159

No major changes since June. Despite the rain, there’s extremely little water. It’s very slippery right now. Below the last rappel point, I placed an Innox anchor in the middle of a rock. This can be used to set up a rope system across the last waterfall. You can climb back up on the left side via the via ferrata. (traduzione alternativa)

Since there was too much water in the stream back in May, we went back there today when the water level was much lower. The photo shows the canyon at low water levels near the final waterfall. (traduzione alternativa)

The Häselgehrbach was at a normal water level today. A bit slippery, but the higher rappels were still manageable. I absolutely cannot recommend the R22 shown in the pictures with the tree sling. Massive risk of falling. Better to take the C20 on the right. There’s a new chain anchor here. The rappel point before the final waterfall must be set up across both pools, since there’s no anchor in the intermediate pool. A single 50-meter rope is sufficient for this section. At the final waterfall, we set up a rope slide from the intermediate belay station and had a bit of fun with some spectators after climbing back up via the via ferrata. On our next ascent, we’ll place an anchor at the bottom of the pool to make it even easier to set up a rope slide. Otherwise, it’s a really beautiful vertical stream with a rapid succession of 20–25-meter rappels. (traduzione alternativa)

Walked at high water level. It was fun. Currently more slippery than usual. Anchors are in the usual condition (ok). Photo of the last waterfall. (traduzione alternativa)

We climbed up to the entry point. The water level didn't suit us. We'll be back again. Photo of the final waterfall by the road. (traduzione alternativa)

Today, with a slightly higher water level compared to the pictures, it is still easy to climb as it is superiore equipped. Nice tour with comfortable access and a few aquatic rappels □□□□ (traduzione alternativa)

Entry at the bridge. At the lower entry now chain on the tree; makes the rappel comfortable even for an old man. More slippery than I remembered. The final section currently has to be started via the pools, as there was no sling (with eyelet) left on the tree from which you could abseil through - see photo. (traduzione alternativa)

The water level has been monitored daily since 26.07. Sometimes massive changes within 12 hours. Approx. 3.90 km² catchment area, due to the constant rain we could not walk on the Häselgehr within a week. Yesterday the water level was high, probably (athletically) doable, today there is already far too much water flowing again and stones are constantly flying down the last waterfall. We were at the final waterfall yesterday and today and stayed there for a while. With a steel cable pulley you can have a lot of fun on the via ferrata and you don't have to do without a 20m rappel with water contact. (traduzione alternativa)
