Avvertenzas:
Capricorno sopra SOS15
Attenzione durante la discesa dalla via ferrata all'altezza dell'SOS 15. Sopra di essa si trova un grosso masso che potrebbe cadere. Superare rapidamente questo punto e proseguire dall'altra parte risalendo la via ferrata fino all'imbocco dell'SOS 16. Se si intende iniziare la via ferrata in corrispondenza del punto SOS 15, assicurarsi di non trovarsi direttamente sulla linea di caduta!

Specialità:

Attrezzatura:
Corde: 2x40m

Sintesi: (traduzione alternativa)
A very beautiful, highly recommended aquatic canyon; short rappels in fast-flowing water; exposed belay stations; turbulent pools; a narrow section with little light; a large watershed; no exit points for long stretches. Bolted by ProCanyon.

Idrologia: (traduzione alternativa)
Cold and abundant source water. A large watershed that may contain rocks carried by floods

Accesso: (traduzione alternativa)
From Tolmezzo take the SS512 in the direction of Gemona-Udine (alternatively, take the A23 freeway in the direction of Udine and exit at Gemona-Osoppo) --> pass the lake (Lago di Cavazzo) --> follow the road --> turn right towards Forgaria --> after approx. 100m turn left towards Peonis --> in Peonis keep left towards Forgaria (road SP41) --> at Forgaria keep left towards Flagogna (road SP22) --> at the fork in the road without signs go straight on --> turn right towards Pinzano (road SP1)-->long over the bridge --> after the bridge turn left onto the SP1 --> then turn right towards Maniago onto the SS454 --> from Maniago turn right onto the SS454 --> from Maniago turn right onto the SS454 --> from Maniago turn right onto the SS454>from Maniago take the SS251 in the main direction of Langorone (this road runs along the beautiful Torrente Celina) --> from the village of Cimolais the road goes uphill to Erto --> just after entering the village cross Valle Zemola (in the bend on the left) --> on the right by the small chapel there is a small parking area. 50m further on the left opposite the fountain.

Avvicinamento: (traduzione alternativa)
There is a small chapel right by the bridge that crosses the Zemola. Behind the chapel, a narrow path leads briefly up and then directly next to the canyon (secured with a steel cable), without any great difference in altitude, to a concrete wall. From here, a short downclimb takes you to the stream/entrance to the lower section at approx. 810m. For the upper entry, stay on the path for another 10-15 minutes. At the end, the path leads over a small bridge to the other side and shortly afterwards descends over stirrups into a stone gully and up again on the other side. Then descend into the streambed, this is the entry point for the upper section (860 m)

Giro: (traduzione alternativa)
Without a long way to go, we start right away with a rappel from a large block. The water level should definitely be checked before the tour, as the already turbulent pools can form very strong currents/backwaters. The belays are very well positioned. However, rappels in the water are unavoidable. Some exposed belays can be reached via traverese ropes. At lunchtime, most of the sun reaches the very beautiful, narrowly incised middle section. A short part at the end of the narrow part is almost completely dark (bring a lamp if necessary). After this dark part, the canyon opens up again. This is followed by a very beautiful section with a washed-out rock arch through which the water flows. The chain anchor is in the middle at the back of the rock arch. The rappel leads into a large pool with a strong current. After this point there are 3 more spectacular abseils in beautiful surroundings. Rope traverses to be built help to get safely to the belays and over the abseils. At the end, where the canyon opens up visibly, the rock turns red. After a short stretch in the stream, you will find a blue dot on a rock right marking the exit at approx. 670m.

Ritorno: (traduzione alternativa)
From the marker, go steeply uphill on the right along the narrow gravel road. With a rapid gain in altitude, it goes into the wooded part before returning to the road / parking lot.

Completed as part of the Carinthian Canyoning Guides Association’s training program. Currently low water levels at Zemola. Anchor points are okay. Be careful when descending the via ferrata at SOS 15. There is a large boulder above that could potentially fall. Pass this section quickly and continue up the via ferrata on the other side to the entry at SOS 16. (traduzione alternativa)

Automatisch importiert von Descente-Canyon.com für Canyon Val Zemola DC++, ne posant aucun problème. Retour dans ce canyon en conditions "normales". Superbe et malheureusement trop court, dommage qu'il y a pied dans toutes les vasques. Équipement béton. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2529/observations.html)

A landslide that occurred after the small bridge changed the topography of the canyon. Currently, rope descent No. 10 follows rope descent No. 13. The stream now flows beneath the debris. It’s possible to cross it, but the terrain is unstable. (traduzione alternativa)

A large portion of rock (EN: landslide, IT: frana) has fallen into the canyon below the little bridge. Passing is possible, though with care. Water colour changed multiple times during our descent.

We hiked through the canyon for the first time this evening. It's still very beautiful, but it really shows off its true beauty in the morning light. Otherwise, everything was great. (traduzione alternativa)

Actually a good flow, perfect for Friulcanyon this weekend. A reminder to go easy in the pools, there's hidden rocks and a bit more gravel than usual. The approach is marked with blue dots + ferrata in the exposed parts, however the grass is high and ticks are about.

Everything tip top. Little water for this time of year. Access at the chapel marked with blue dots so that you don't follow the well-trodden wrong paths. (traduzione alternativa)
