Attrezzatura:
Corde: 2x50m/1x20m

Sintesi: (traduzione alternativa)
Very beautiful rappel canyon; many slippery spots; the highest abseils come at the end; most of the sun is in the canyon from midday; well equipped. Pissanda was equipped with SOS badges in January 2023 (21 marked abseiling points), some sharp edges; most of the abseiling points are in the watercourse, so it is essential to check the water level; catchment area approx. 7km².

Idrologia:

Accesso: (traduzione alternativa)
From the village of Amaro ri. Venzone --> turn left into the village of Portis and then past the last house --> drive up the road to the exit --> here you have a small parking lot (from the parking lot you can already see the last rappel and the water level) --> approx. 260Hm.

Avvicinamento: (traduzione alternativa)
From the parking lot, cross the stream and walk up the steep hiking trail to the right --> after approx. 15 min. a second hiking trail joins --> keep to the left and walk up the path over several concrete safety barriers. At 540m you come to the stream where a path on the left leads directly to a small water catchment in Pissanda.

Giro: (traduzione alternativa)
Walk along the slippery streambed and overcome several climbing passages to the 1st small slide approx. 4m --> slippery passage with rappel on the left (traverese rope possible) --> after a short walking passages another short rappel --> then walk over blocked terrain --> rappel point (approx. 27m) --> followed by 3 more short rappels --> possibility 1. Emergency exit (left) --> rappel and slide passages --> 2nd emergency exit (left) --> rappel approx. 15m --> small slide --> rappel approx. 10m --> after checking the water depth another small slide --> 3rd emergency exit (left) --> now follow the highest rappel points with 13m, 40m, 25m and 35m (the safest way to the last stand (rappel) is with a rope traverse, bolts available).

Ritorno: (traduzione alternativa)
After the last rappel and a short walking passages you leave the streambed on the right side--> in a short time you are at the parking lot (260Hm).

Beware of massive rocks above the last belaystation that could fall directly onto the belaystation. Massive rocks have already fallen and it is unpredictable when the rest will come. The spot is visible from the parking lot. Otherwise all stands are ok, a few geese are currently lying inside from the winter. (traduzione alternativa)

Ascent can be done in 30 min, there were three of us and we walked the Pissanda in 2h45, anchoring ok, partly slides doable, as known very slippery at the top, it gets better towards the bottom (traduzione alternativa)

The dead now is not on the way but at the entry. I don't know what it is but stinking as hell. With the previous rain (~80mm in the two days) the water level was exceptional for this canyon, that made it a real fun but still caused no problem. One nut of the last belay is loose (the other is OK),

In our opinion, it is no longer as slippery as described in previous inspections and there are no more dead animals. We climbed it when the water level was slightly higher. In the narrow abseiling point there is currently a tree on which the rope can easily get caught when pulling off. There is currently hardly any gravel in the pools and therefore often surprisingly deep. All belays are in order. (traduzione alternativa)

Something is dead in the midway, you can find remnants under the ladder. You don't feel like getting into water afterwards. Anchor no. 1 got a shot but still OK.

Have rarely walked such a slippery canyon. You have to be very careful not to slip. There were two of us in the canyon and it took us 2 hours. Access 30min. All stands in order. (traduzione alternativa)

Unfortunately again much more slippery than on various ascents last year. Stands ok so far; the tree in the narrow section caused problems this time when pulling off; it is recommended to use the anchor on the right at the exit for the last 3 m (then you can theoretically climb up again and release the rope from the tree).
