Avvertenzas:
Too much water flow in the receiving water
There is the situation that the water flow in the canyon descent is fine, but the canyon then flows into a receiving stream that carries too much water and this dangerous predicament cannot be avoided (e.g. in the side canyons that go into Balcés Estrechos, e.g. Barranco Pallas, see also 2 pictures

Specialità:

Attrezzatura:
Corde: 1 Notseil 20m

Sintesi: (traduzione alternativa)
A narrow and deeply incised canyon that is usually climbed without water flow. Side canyon of the Gorges du Verdon. A great tour when the water is flowing.
Caution: At the easiest exit you have to swim through the Verdon, and at the normal exit you even have to wade upstream. On different days in the Verdon there are different sized water outlets in the reservoir above. These can be obtained from the power station operator. The canyoning and rafting guides are usually also aware of this.

Idrologia:

Accesso: (traduzione alternativa)
From Castellane on the Verdon, first 12 km down the Verdon, then turn left onto the D 955 and continue for another 16 km to Comps-sur-Artuby. At the beginning of the village, turn right at an acute angle and continue on the D 71 for approx. 13.5 km to the Balcons de la Mescla viewpoints (restaurant). Park a car here (do not park on the road beforehand, as there is a risk of burglary).

Continue with the other vehicle (or on foot) for 2.5 km to the bridge over the Artuby. Park the second vehicle at the small snack bar. If you want to get out via the rope-secured path on the orographic left bank, you can continue in the direction of Belvédère Aiguines and stop about 300m beforehand in a small parking bay.

Avvicinamento: (traduzione alternativa)
From the bridge on the orographic right (east) bank approx. 400 m southwards. Follow the red (sometimes blue) markings that meadowed the way back to the bridge for the bungee jumpers in the opposite direction. Then descend via a metal ladder and secured rock ledges to the bottom of the gorge.

Giro: (traduzione alternativa)
After descending into the streambed, pass under the bridge in still open terrain. Then a steady downclimb in polished rock formations until you reach the backwater of the Verdon.
If the water level is good, there are long swims and small possible jumps. Difficulties only at siphon blocks.
From here it is a swim canyon. Despite the lack of water flow, not without charm, especially in the ascent and descent.

Ritorno: (traduzione alternativa)
After the Artuby flows into the Verdon, immediately after the rock face at its prominent bend (Mescla) about 100 m up the Verdon. Immediately after passing the rock face on the right (orographic left) side, turn right (east, later north) upwards. Climb through an 8 m high wall on steel brackets and finally come to a path that takes you to the right (in a southerly direction) to the road. Turn right again here and after a few hundred meters you reach the restaurant.

If there is too much water in the Verdon, you can also ascend via a newly insured path on the orographic left bank. From the mouth of the river, ascend on rock slabs to the left into the forest, then always along the color markings into the forest. Soon you ascend along fixed ropes through steep scree before you reach the wall. Keeping left, climb through a chute, over a traverse and several steep wall steps into the Schofen area above (fixed ropes, possibly take ascenders with you). First turn right briefly and then cross out to the left on ledges. Always follow the color markings and cairns, otherwise it will be difficult. Ascent time 30-40min

Automatisch importiert von Descente-Canyon.com für Canyon Artuby Aucun intérêt dans ces conditions. 30 minutes d'accès, 50 minutes de descente dans le lit à sec avec traversée de vasques qui commencent à croupir. Puis 10 minutes de bief propres et froids. Puis on arrive au verdon.Remontée infernale par le verdon (option1). C'est très engagé jusqu'à l'échelle. Puis c'est interminable dans le pierrier et sans fin sur la route. (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2689/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Artuby Rien ne coule sur la plus grande partie du parcours. Mais il reste pas mal de vasques bien fraîches et avec une qualité d'eau encore bonne. Reste fort beau dans ces conditions. Retour RG ok, mais il faut être bien attentif aux balisages et c’est assez physique. Merci pour la réfection récente du passage équipé. On a remonté des déchets mais il reste encore des bouts de câble à remonter (juste à la sortie du passage équipé en cordes) (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2689/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Artuby Artuby top de gamme. Nous avons reequipé la partie des câbles moisis dans la sortie rive gauche du Verdon (câbles électriques) avec des vrais spits et des stats. Nous n'avons pas réussi à transporter tous les déchets (morceaux de câbles) si vous pouvez en évacuer lors de vos passages c'est chouette. Lionel (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2689/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Artuby Great conditions, a good flow of water from top to bottom, all Pools full and Long stretches of swimming. We exited on the path on river left which went better than expected. Don't loose the yellow and blue markings. The black electrical cable helps ascending the scree and there are new ropes and bolts on the climbing sections. After that first keep slightly to the right, the head left to reach a good path which crosses into friendlier Terrain. Highly recommend under the current conditions (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2689/observations.html)

Done today with the best water flow, lots to swim and a wonderful atmosphere. Exit via the marked path, secured with electric cables and fixed ropes, which leads up from the mouth on the orographic left bank of the gorge. The Verdon gorge had too much water for the standard exit (traduzione alternativa)

Automatisch importiert von Descente-Canyon.com für Canyon Artuby Maintenant ou jamais, un eau translucide et assez bonne. Mais ça ne va pas durer s'il ne pleut pas fort. Rencontré un sympathique groupe du CAF, nous nous sommes mutualisés pour franchir le Verdon par la "botte secrète" car la remontée rive gauche ne nous tentait pas. Par contre attention nous avions des informations erronées concernant le lâcher de barrage (32 pour moi et 16 pour eux) par deux canaux différents, dans les faits il y avait au moins 40 ce qui nous a occasionné pas mal de bricolage. Ce serait intéressant que ce moyen de sortir de l'artuby (décrit par moi même en 2018?) soit renseigné dans les moyens de sortie. Je ne sais pas le faire. Lionel (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2689/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Artuby DANGER !!! La sortie rive gauche est très dangereuse. Les premiers câbles électriques qui servent de MC ont l'air corrects, mais les cordes aux passages délicats sont HS (cramées et jonchées de tonches). Les éboulis parpinent en permanence. Le dernier câble de MC n'est pas arrimé !! Heureusement, je n'ai pas mis tout mon poids dessus et m'en suis rendue compte en voyant l''ancien amarrage : une petite branche, actuellement cassée et posée au bord du ravin. Sur la fin de la remontée, nous n'avons plus vu de traces bleues (ou autre couleur, beaucoup de traces jaunes fluo sont présentes au début). Nous avons pris ce qui semblait être au plus simple. De l'escalade instable. Mon partenaire est resté plusieurs fois avec des prises dans les mains et ce qui devait arriver arriva : un frigo m'est passé à 50 cm. A partir de ce
